

CHELSEA
BUILDING PRODUCTS

creating an original over and over and over

A close-up photograph of a hand with the index finger pointing towards a stack of colorful markers on a table. The markers are in various colors, including red, green, blue, and black. The background is blurred, showing a white surface and some indistinct shapes. A blue banner with a yellow border is positioned in the upper right corner, containing the text "It all starts with an idea."

It all starts with an idea.

At Chelsea we define ourselves not only by what we produce but how we approach our craft.

We conduct our business with integrity and encourage innovation and efficiency, while maintaining a deep commitment to sustainability. We create innovative, energy-efficient and sustainable products by developing polymer-based compounds in an environmentally responsible and efficient manner. By applying advanced compounding methods, process and extrusion tool design, combined with a skilled workforce, we consistently deliver products which meet or exceed market requirements and our partner's expectations.

We pride ourselves on being a solution provider that works closely with our customers to discover their particular needs. We consider all "pieces of the puzzle" when designing a product – the appearance, performance and application – making sure each aspect fits together perfectly.

Chelsea Building Products is a committed partner to the success of your business.

As your partner, we work closely with you from the beginning stages of product development through production and delivery of your components. Even after the project is complete we continue to offer our value-added services to improve your manufacturing of the component, increase your market share or to continue developing additional products.

All the tools, all the talent, all in-house!

Quality is evident throughout our process: from product design, material development, extrusion tooling design and the finished product. Our quality control standards, which are constantly tested and expanded, assure that our components meet all design and industry specifications.

Not only are we judged by our own quality standards, Chelsea also participates in industry quality programs monitored by independent third-party testing agencies.

When your design requires a unique geometry or material system, we offer solutions to ensure that your product achieves the required aesthetic and performance characteristics you are looking for.

Working today for a more sustainable tomorrow.

Our facility runs at peak performance and we are constantly improving our efficiencies. We believe that our work should protect the environment and contribute to our communities as it benefits our customers and employees. We have re-engineered our plant to be more energy-efficient and our manufacturing process to handle your toughest product requirements. We recycle paper and reclaim water in our production process, which lowers energy costs and conserves natural resources. The end results are products that are efficiently manufactured, conserve energy and have a longer maintenance-free life cycle.

ADVANTAGES:

- Research and development center on-site
- Operating 24/7, capable of producing millions of lineal feet per year
- Flexible manufacturing
- Advanced extrusion tooling design and fabrication
- High-speed dies and calibrators
- Automated in-house blending capabilities
- Custom color capabilities
- Third-party quality certification

From concept to reality.

Uncompromising quality across a wide spectrum of services.

Your requirements are unique to your market. We work with your ideas and combine them with our experience to create products that meet your expectations.

Our experienced team of product and tooling engineers will work to transform your ideas into a virtual design using CAD software and rapid prototype equipment. Then, we compare “notes” to ensure that the design captures what you have in mind. Our materials team also participates in the development process. This group lends feedback on the material used to manufacture products that meet your specifications for dimension, color, finish and application.

We also bring experienced technical and marketing resources into the project, providing valuable perspective on component processing and fabrication as well as the selling and promoting of the finished product.

SALES, MARKETING AND SUPPORT PROGRAMS

- Strategic Planning
- Sales Training
- Literature Development
- Promotional Planning

ENGINEERING

- Product Application Analysis
- Product Design
- Performance Considerations
- Product Testing

TECHNICAL SUPPORT

- Fabrication Analysis
- Plant Start-Up Assistance
- Consultation
- Process Improvements

TESTING AND CERTIFICATION

- Quality Documentation
- Participate in Third-Party Certification Programs
 - Raw material testing and certification
 - Finished product testing and certification assistance

CUSTOMER SERVICE

- Product Knowledgeable
- Web-Based Account Access
- Professionally Staffed
- Customer Focused

Continuous improvement.

Every day we help our customers create better products.
Whether developing a specific PVC compound to assure superior performance,
or suggesting design changes to reduce fabrication and application complexity,
we work hard to exceed our customers' expectations.

When you partner with Chelsea Building Products you get all of the knowledge, expertise and resources our company has to offer. We are committed to finding new and better ways to improve our processes through research, information exchange, innovation and investment to help our customers transform ideas into quality products.

Building close relationships with our customers and reacting quickly to their needs are two of our most important operating principles. Our organizational structure ensures that all employees – from facility managers and engineers to production staff – can make the right decisions and recommendations quickly. At the same time, our adherence to performance benchmarks ensures consistent quality performance throughout our company.

At Chelsea we define ourselves by how we approach meeting our customers' needs as much as by what we produce. We conduct our business with integrity and a clear understanding of who our customers are and how we serve them while encouraging innovative solutions and maintaining a deep commitment to environmental sustainability.

Almost everywhere you go polymer-based products are a key part of our lives. They are attractive, energy-efficient, long-lasting and virtually maintenance-free. Look around the house, inside and out, or take a walk around the neighborhood. Chelsea is changing the way we view this material. PVC and Composite Windows and Doors, Composite Reinforcement, Cellular Mouldings, Composite Flooring, Exterior Wall Cladding and Shutters are just some of the products where you can find Chelsea extrusions.

We believe the best business partner is one who understands your business and markets as well as you do. This requires a long-term view of business relationships, the ability to listen, learn and apply knowledge across industries and markets, as well as a shared passion for creating the best products possible.

No matter the industry or market you are involved in, we look forward to leveraging our expertise and technical knowledge to help you develop better, more effective products. We want to learn about your business and contribute to the success of your products and company.

You can count on us for exceptional service and quality products knowing that the resources of Chelsea Building Products are at your service. With this diverse experience we reach out to many specialty markets and provide innovative, quality solutions to meet your requirements.

We welcome the opportunity to create an original impression for you.

Over and over and over!
